

# Interactive Visual Dashboard for Employee Performance Evaluation

## Introduction

Employee performance evaluation is critical for organizational success. By using data-driven methods, organizations can assess performance accurately and take strategic actions. This project focuses on creating an interactive visual dashboard that monitors key performance indicators (KPIs) such as:

- Sales
- Attendance
- Productivity
- Goals Achieved

### Objectives:

- Build a user-friendly dashboard
- Visualize real-time performance data
- Enable management to make data-backed decisions

# Interactive Visual Dashboard for Employee Performance Evaluation

## Key Performance Indicators (KPIs)

### 1. Sales:

- Tracks the revenue generated per employee
- Monthly/quarterly sales comparisons
- Trend lines and target benchmarks

### 2. Attendance:

- Days present/absent
- Leave types and patterns
- Attendance consistency over time

### 3. Productivity:

- Task completion rates
- Time spent on projects
- Efficiency ratio (output vs. time/input)

### 4. Goals Achieved:

- Individual SMART goals tracking
- Progress bars or completion status
- Comparison of set vs. achieved targets

## Visual Representations:

- Bar charts
- Pie charts
- Progress bars
- Line graphs

# Interactive Visual Dashboard for Employee Performance Evaluation

## Dashboard Design & Tools

Tools Used:

- Microsoft Power BI / Tableau / Google Data Studio / Excel
- Python (for data processing)
- SQL (for database queries)

Design Elements:

- User filters: by department, role, time period
- Color-coded KPIs: red (low), yellow (average), green (excellent)
- Interactive elements: dropdowns, tooltips, clickable graphs

Wireframe Sketch:

- Left panel: Filters
- Main panel: KPI widgets
- Bottom: Summary and insights

# Interactive Visual Dashboard for Employee Performance Evaluation

## Data Collection & Integration

Data Sources:

- HR Management System
- Sales CRM (e.g., Salesforce)
- Project Management Tools (e.g., Jira, Trello)

Data Integration Workflow:

1. Extract: Use APIs or database connections
2. Transform: Clean and standardize data
3. Load: Import into visualization tool

Security Measures:

- Role-based access control
- Data encryption in transit and at rest
- GDPR and company compliance policies

# Interactive Visual Dashboard for Employee Performance Evaluation

## Insights & Use Cases

Real-Time Decision Making:

- Identify top and low performers
- Allocate resources effectively
- Trigger alerts for underperformance

Use Cases:

- Monthly performance reviews
- Annual appraisals
- Employee incentives and training needs

Example Insight:

"Team A has a 95% goal completion rate but only 75% attendance. Possible burnout risk - HR to intervene."

# Interactive Visual Dashboard for Employee Performance Evaluation

## Conclusion & Future Enhancements

### Conclusion:

Interactive dashboards revolutionize employee performance tracking by turning raw data into actionable insights. They drive transparency, accountability, and engagement.

### Future Enhancements:

- AI-powered performance prediction
- Sentiment analysis from feedback
- Integration with wellness and engagement tools

### Call to Action:

Encourage leadership to adopt data visualization tools to foster a high-performance culture.
